Solution Architecture (Minimum Viable Architecture):

What we should do: Propose a minimum viable architecture that is flexible and fulfills the minimum necessary requirements.

MVP Idea: News tracker application for reading day to day feeds and updates.

Product Requirements:

1. The user interacts with the application.
2. Registers by giving the details.
3. Integrate the application.
4. It has news APIs and store the data in the database.
5. The database will have all the details.
6. User can search the news by using a search bar.
